ATENA HATTA

FRONT-END DEVELOPER

Vancouver, BC | (604)764-5646 | hattaatena@gmail.com | LinkedIn | GitHub | Portfolio

EXPERIENCES

Frontend developer / Summations (Toronto, ON, Canada)   Aug 2023 – Present
- Coding with TypeScript, Next.js and Mantin to build the company's website with a focus on UI/UX.
- Designed using Figma, I implemented a design system by creating components, enabling a smart design structure. This approach ensures that subsequent coding is streamlined.
- Improved server performance by actively utilizing SSR with Next.js. This resulted in enhanced server response times and a significantly better user experience.

Frontend developer / e-Epic Technologies (Vancouver, BC, Canada)   Aug 2023 – Present
- Implemented data integration using GraphQL, and substantially optimizing website performance and ensuring smooth.
- Collaborated closely with the company's development team, facilitating smooth communication. Proactively suggested code improvements, contributing significantly to the development process.
- Architected and deployed responsive web applications with Nextjs and TypeScript, emphasizing mobile-first design principles.

Frontend developer / Rimse Co., Ltd. (Tokyo, Japan)   July 2023 – Present
- Led the complete design and development of an application where businesses and users can mutually evaluate each other. Conceptualized the app's foundation using Xmind, managed data with Airtable, and crafted the layout design's wireframes using Figma, and implemented design-conscious UI using Next.js and NextUI.
- Used ChatGPT to create 100 distinct personalities and conducted tests to visualize user trends and evaluations within the app, optimizing operations through AI utilization.
- Utilized Cloudinary and NextUI to reduce website rendering costs and successfully enhanced overall server performance through SSR implementation with Next.js.

SKILLS

I'm fluent in JavaScript and React. I have also written a good amount of code in Next.js, HTML, and CSS. Additionally, I have designed a database using MongoDB in which I was able to avoid redundancy and maintain data accuracy and integrity. I am particularly focused on TypeScript and am quick to pick up new languages as needed.

PROJECTS

Full stack app   June 2023

My Youtube (React / Node.js / express / MongoDB / TailwindCSS)
- Implemented the backend using Node.js, integrating with the YouTube API to fetch and display videos. This integration enables users to play the same content as available on YouTube and provides a search functionality for desired videos.
- Enabled user authentication, allowing logged-in users to store data in MongoDB. This feature empowers users to list videos for "watch later" and subscribe to YouTube accounts directly.
- Prioritized a user-centric approach, focusing on UI and UX, while ensuring compatibility with responsive design principles.

Front-end, UI   Mar 2023

Trivia Guru (JavaScript / jQuery / Bootstrap)
- Effectively utilized JavaScript and jQuery to add interactivity, and user interaction on the quiz platform.
- Leveraged my coding skills to establish a seamless connection between the top page and animation part.

EDUCATION

Web and Movile Aplication Development Diploma   Sept 2022 – Present

Cornerstone International Community College of Canada
